Charging time	Up to 3 hours
Dimensions / Weight	197 x 188 x 79 mm / approx. 325 g
In the package	Headset, dongle, USB-C cable, audio cable, hard case, manual

Description:

The Axtel Advance Pro is made for people who need to concentrate in a room that never really goes quiet. Hybrid active noise cancellation of up to -38 dB takes an open office down to library quiet, and a press of the ANC key opens pass-through mode so you can hear a colleague without taking the headset off. Ultra soft memory foam 2.0 cushions cover the whole ear instead of pressing on it, and the flip-to-mute boom microphone keeps your voice clear through back-to-back calls. The 2.4 GHz dongle sits in a slot inside the earcup, so it always travels with the headset, and it runs alongside Bluetooth 5.4. One charge lasts up to 80 hours and three hours charge brings it back to full. When the battery wears out you fit a fresh Axtel cell yourself, so a single headset stays in use for years.
