An open office, taken down to **library quiet.**

Hybrid active noise cancellation of **up to -38 dB** takes out the low, constant noise an office runs on, the air handling, the traffic outside, the conversation two desks away. Press the ANC key once and pass-through opens, so a colleague can still reach you without the headset coming off.

Ultra soft memory foam 2.0 ear pads close around the whole ear rather than pressing on it, and the flip-to-mute boom microphone with dual-microphone ENC carries your voice through back-to-back calls.

A battery you change yourself

A flat battery normally means a dead headset. Here it means a five-minute swap and another few years of use.

The dongle rides in the earcup

It cannot be left in a drawer or lost in a laptop bag, so any desk you sit down at becomes your desk.

80 hours, then three to refill

Charge it on a Friday and you will not think about it again until the week after next. 45 hours with ANC on.

40 mm drivers, 20 Hz to 20 kHz

Full-range stereo, so one headset carries the client call and the album you work to. Cable included for the rest.

Hard case in the box

Headset, dongle, both cables and the manual pack into one shell, so nothing gets crushed in a bag or left behind.

Focus deeply. **Keep it for years.**
